01. Introduction

Our main objective is to collaborate with companies dedicated to satisfying the most demanding needs of shipping companies that operate or call at the Port of Cartagena, betting on a quality service and excellence in the framework of safety with more than 28 years of experience in this sector demonstrated throughout our professional career and endorsed by consignees, repair shops and industrial companies both in the area and nationally and internationally.

Diving Contractor S.L. provides services of hull inspection, propeller polishing, underwater repairs or any other scheduled or emergency underwater repairs that may arise withing ports of Tarragona - Castellón - Sagunto - Valencia - Alicante - Torrevieja - Cartagena (base logistic) – Garrucha – Carboneras – Almería.

Diving Contractor SL has a dynamic team with great experience and dedication, offering in all its works the maximum experience to minimize the stay in port applying work systems that minimize delays in the execution of operations so demanded by our customers.

02. Our services

- **Hull inspections for class and for hull fouling conditions:**
 - UWILD approval certificates In water survey.
 - Hull inspection not class involved.
 - Hull inspection with ROV approval certificate class.
 - Hull fouling inspection with ROV qualifications IMCA certificate.
- Welding and burning repairs.
- Propeller polishing.
- Hull repairs.
- SBM works & maintenance.
- Blanking & plugging.
- Doubler plates.
- Entanglement removal.
- Transducer replacements.
- NDT inspection Lloyd´s certificate.
- Ultrasonic Thickness measurements Lloyd´s certificate.
- Cathodic protection measurement inspections Lloyd´s certificate.

Propeller polishing

The underwater propeller polishing and the maintenance of smooth surfaces is vital in order to save energy and optimize the performance of the vessel. A rough propeller leads to power loss, which increases fuel consumption. Studies have shown that propellers may be polished every $\frac{2}{3}$ months to sustain the vessel's peak efficiency.

Hull repairs

Diving Contractor SL offers options for temporary repairs in all ports between Tarragona at Almería, including anodes replacement, cofferdams, doubler plates, blanking, rope cutter replacement, transducer replacement, amongst others.

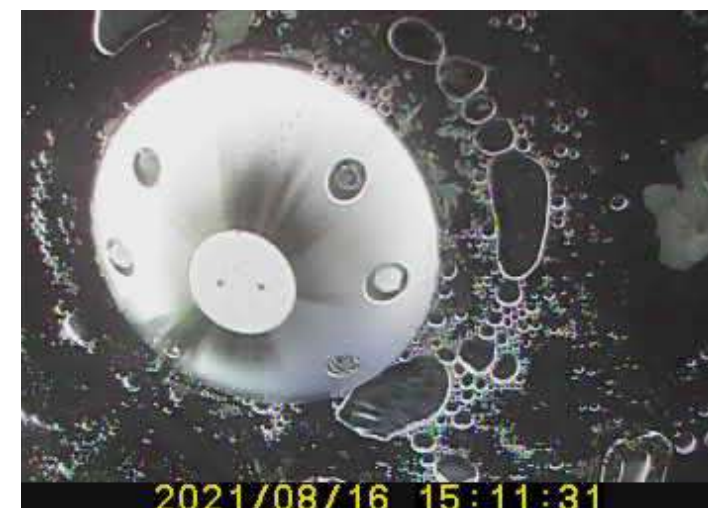

Blanking and Plugging

Blanking or plugging is performed to enable crew members to conduct internal repairs. Diving Contractor SL designs its own blanks and plugs in order to adapt at best.

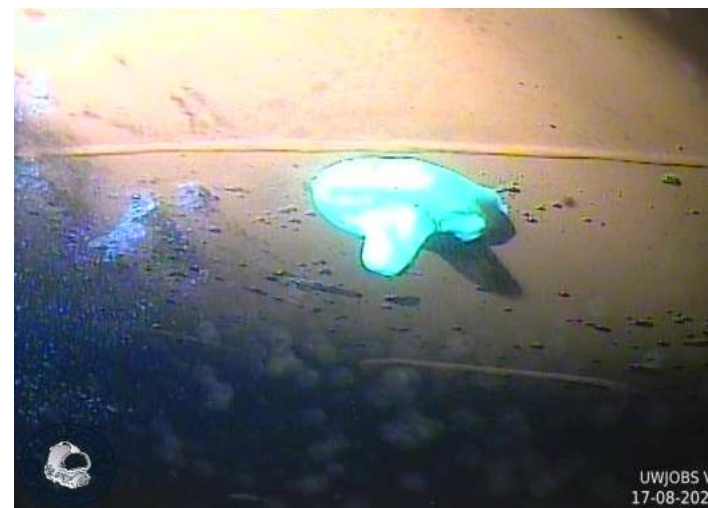

Entanglement removal

Entanglements on the propeller shaft can cause adverse issues for the performance of the vessel as rope guards and stern seals can be damaged. It is imperative entanglements are removed immediately in order to avoid larger issues, resulting in increased costs.

Transducer replacements

Transducers can fail and replacement is necessary for correct readings and the safety of the vessel; this is another featured repair Diving Contractor SL can conduct for the vessel's smooth operation.

Doubler plate

A small piece of plate attached to a larger area of plate that requires localized strengthening, usually at the attachment points of a stiffener. Also, a flat plate welded to a plated structure that has suffered damage.

Anode replacement

Cathodic protection is a method for preventing corrosion on submerged metallic structures. The technique is based on converting active areas on a metal surface to passive, in other words making them the cathode of an electrochemical cell. The simplest method to apply cathodic protection is by connecting the metal to be protected with another more easily corroded metal to act as the anode. Zinc, aluminium and magnesium are the metals commonly used as anodes therefore, anode maintenance is essential.

Tarragona

Castellón

Sagunto

Valencia

Alicante

Torre Vieja

Cartagena

Garrucha

Carboneras

Almería

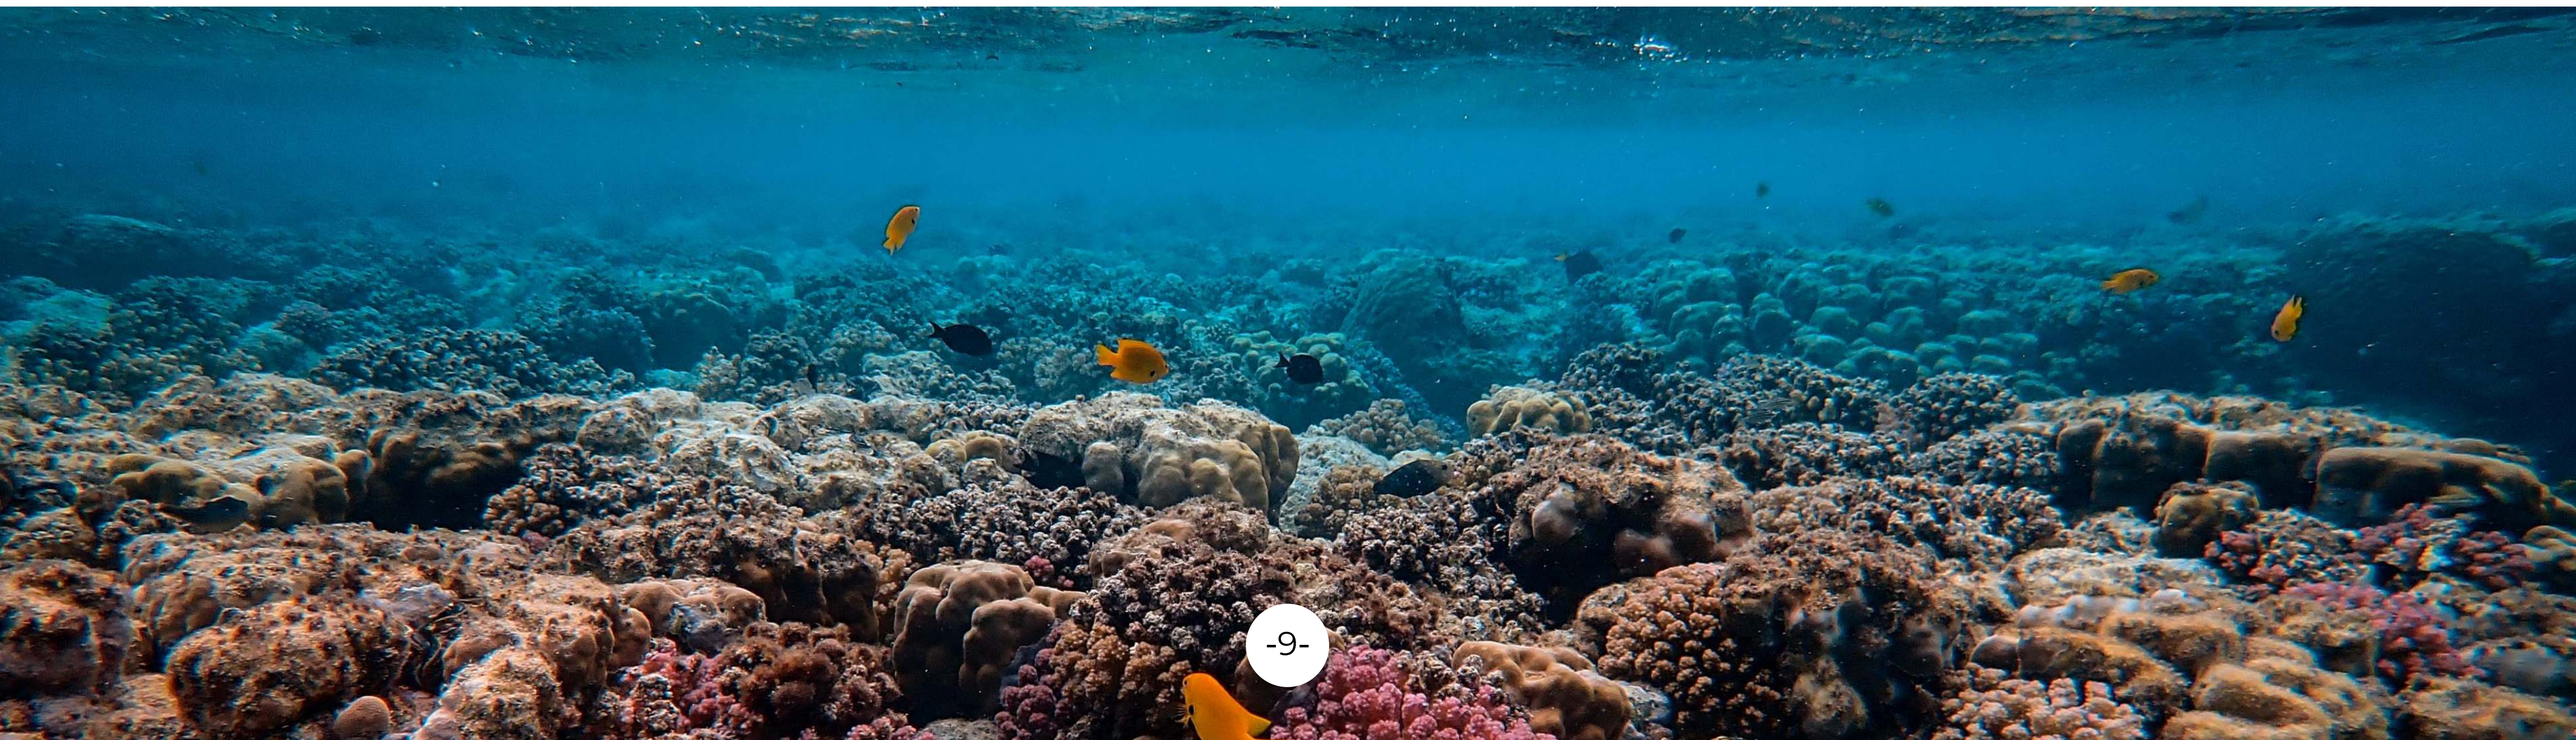

* All the ports placed between the areas from Tarragona to Almeria not listed above are minor ports, still our company can provide services at either of them.

* The company can provide services at other ports not listed in case of necessity, for example to satisfy an exclusive fleet contract.
